

## Özel Açı Sorularını İnceleme ve Bazılarının Genellemesi...

Aşağıdaki şekilde "Bir ABC üçgeninin iç bölgesindeki bir D noktasının köşelere birleştirilmesiyle, köşelerde oluşan 6 tane tam sayılı Özel Açılı Soruları" bir programlama dili olan Python ile aşağıda kodları verilen program sonucunda elde edilen açı sorularından birkaçını görebilirsiniz.

Şekillerdeki açılar büyüklük itibariyle orantılı çizilmemiştir.

Amacımız, bu şekilleri inceleyerek, "**açılar arasında ilişki kurarak oluşan bir kurala uyan başka sorular var mı?**" sorusundan hareketle "**acaba genelleme yapılabilir mi?**", en önemlisi de yaptığımız "**genellemenin doğruluğunun ispatlayabilir miyiz?!**" sorularına cevap aramaktır.

Python kodlarını yazarken, dayanak olarak "**Trigonometrik Ceva Teoremi**" kullanılmıştır. O da "**1 indisli açılardan sinüsleri çarpımı, 2 indisli açılardan sinüsleri çarpımına eşittir...**"; yani " **$\sin a_1 \cdot \sin b_1 \cdot \sin c_1 = \sin a_2 \cdot \sin b_2 \cdot \sin c_2$** " dir

Buna göre; işte Python kodları!

```
#-*- coding:cp1254 -*-
import math;
p=math.pi;say=0;
for a1 in range(1,90):
    for a2 in range(1,90):
        for b1 in range(1,90):
            for b2 in range(1,90):
                t=180-a1-a2-b1-b2
                for c1 in range(1,t):
                    s1=math.sin(a1*p/180)*math.sin(b1*p/180)*math.sin(c1*p/180);
                    s2=math.sin(a2*p/180)*math.sin(b2*p/180)*math.sin((t-c1)*p/180);
                    s1=math.trunc(10**15*s1);s2=math.trunc(10**15*s2);
                    if s1==s2:
                        print"%d , %d , %d , %d , %d , %d"%(a1,a2,b1,b2,c1,t-c1)
```

hepsi bu!

*İşte programı çalıştırdığımızda elde ettiğimiz binlerce soru!*
